PRACTICE INTELLIGENCE

FUELING BETTER-INFORMED BUSINESS DECISIONS

Integrated Medical Partners' (IMP) analytics and decision support solutions provide the quality information and resources necessary to improve workflow efficiency and fuel superior practice performance.

Data in itself is meaningless without the ability to interpret and capitalize on it. IMP partners with physician leaders to manage and mine critical, comprehensive and trusted business and clinical data sets. Through the use of software and processes custom-tailored to a practice's needs, IMP empowers practice leaders with competitive knowledge and accurate future forecasting abilities. By leveraging our advanced analytics reporting, we enable practices to make better-informed, strategically-driven business decisions.

IMP extends its commitment to predictive data and quantitative results through its participation in SurveyVitals. Measuring and monitoring satisfaction rates of both the medical staff and patient pool is critical for physician practices to further support the initiatives of their health systems. Surveys act as a powerful tool in measuring practice performance and maximizing support of the hospital and its patients.

"IMP's analytics package has greatly enhanced our practice management capabilities. The numerous reports keep us up-to-date on our financial status, provide feedback on our operations and assist with marketing strategies. The analytics are highly customizable and the IMP team is always responsive in generating new reports specific to our needs."

-Colleen Piazza, Radiology Associates P.C.
